

ABSTRACT OF THE DISCLOSURE

The invention relates to a method for transferring applications to a different platform, which prevents creation of GUI definition at the target platform. With the present invention, GUI definitions for target applications can be automatically created from GUI definitions in original applications because the GUI definition file 35 for the original application 1 is used to display menus and create a GUI definition file 34 for the application in the target environment to which GUI information obtained from the displayed statuses has been added.
